Hydraulic engineering is the science of water in motion, and the interactions between the flowing fluid and the surrounding environment. Hydraulic engineers are concerned with application of the basic principles of fluid mechanics to open channel flows and real fluid flow hydrodynamics.

Hydraulic engineering consists of the application of fluid mechanics to water flowing in an isolated environment (pipe, pump) or in an open channel (river, lake, ocean). Civil engineers are primarily concerned with open channel flow, which is governed by the interdependent interaction between the water and the channel. Welcome to the website of the Department of Hydraulic Engineering of the Faculty of Civil Engineering and Geosciences of Delft University of Technology. Civil Engineering Hydraulic Engineering is a specialised field within Environmental and Civil Engineering. Hydraulic systems are operated or. The hydraulic engineering group covers areas within hydropower engineering, hydrology and hydraulics. The research profile of the group includes both basic.
